# MatrixStore.

The trusted nearline storage platform  
Nearline and archive for EVS workflows

## Need a secure, scalable and affordable nearline archive?

- You need a cost effective and scalable storage platform that integrates seamlessly with your live workflows and is non-disruptive to your operators
- You need to free up space on your production storage but need IPDirector to keep the location of all the content
- You are required to make sure both high, and low resolution, assets are available on demand from multiple platforms
- You need a secure nearline storage platform that integrates with and complements your current EVS infrastructure
- You have footage from the past that gets used regularly but it is sat on a USB disk or is hibernating on a cartridge on a shelf somewhere
- You require the ability to restore clips from legacy content at a moments notice
- You are required to ensure your valuable assets are guaranteed to be protected, authentic and available now and for the foreseeable future

If any of the statements above ring true this data sheet highlights how MatrixStore can help to simplify the preservation of your production assets in EVS workflows.

Please contact the Object Matrix team to arrange a demonstration, to setup a proof of concept or to discuss the benefits of the MatrixStore in EVS workflows.

## Benefits at a Glance

- Proven & trusted nearline technology
- Handles multiple, simultaneous high-res streams
- High & low resolution assets available on demand
- Growing file support
- Integrated with MAMs, DAMs & PAMs including Avid Interplay
- Enterprise, non-proprietary hardware coupled with industry leading object storage
- Automated AS11 metadata extraction

## MatrixStore/EVS Workflows

### Parking & Archive

- Content is archived to the MatrixStore nearline platform from XT servers via XTAccess via the Object Matrix hub
- Clips are available on demand to browse or retrieve from multiple IPDirector instances

### Ingest

- Protect and preserve the content coming in from multiple live streams or cards from the field.
- High & low resolution clips immediately available to editors including growing files
- Backup cards from the field using the DropSpot application from Object Matrix.

## MatrixStore Compatibility

MatrixStore is compatible with the following products from EVS:

- IPDirector, XT2, XT3, XTAccess, XSquare, IPWeb
